The Philosophy of Ecology

From Science to Synthesis

David R. Keller and Frank B. Golley, eds.

Readings in the foundational concepts of the science of ecology

[About the contributors](#)

[Table of Contents](#)

This is the first introductory anthology on the philosophy of ecology edited by an ecologist and a philosopher. It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded. Collectively, these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization. Issues covered include *the challenges of defining scientific ecology, tracing its genealogy, and distinguishing the science from various forms of "ecological-like" thinking; *the ontology of ecological entities and processes; *selected concepts of community, stability, diversity, and niche; *the methodology of ecology (rationalism and empiricism, reductionism and holism); and * the significance of evolutionary law for ecological science.

David R. Keller is an assistant professor of philosophy and director of the Center for the Study of Ethics at Utah Valley State College. Frank B. Golley is Research Professor of Ecology, professor of zoology, and professor of environmental design at the University of Georgia. His books include *A Primer for Environmental Literacy*, *A History of the Ecosystem Concept*, and *Tropical Rainforest Systems*.
